THE PROBLEM

Screens silence your natural blink.

Blinking coats the eye with protective film. On screens, this drops dramatically — leading to lasting strain.

NORMAL 15–20 blinks / min

ON SCREEN 5–7 blinks / min

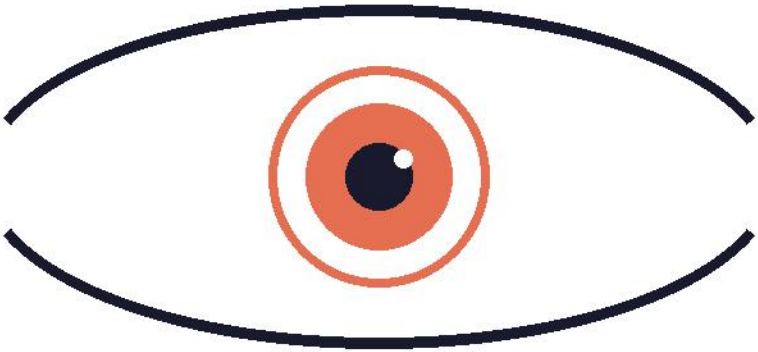
66% reduction
in eye lubrication

CONSEQUENCES

- Dry eyes
- Headaches
- Blurred vision
- Fatigue

Source: American Optometric Association, Vision Council 2023

THE SOLUTION



AI Eye Fatigue Guard

A Chrome extension that monitors your blink rate using your webcam — in real-time, 100% on-device.

- **Blink rate tracking**
  Counts blinks/min · flags abnormal rates instantly
- **Live fatigue scoring**
  0–50 score updated every 33 ms
- **Screen adaptation**
  Auto-warms screen · dims when fatigue is detected

HOW IT WORKS

Four steps.
Fully automatic.

01
Webcam
Captures your face using your device camera

02
AI Model
TensorFlow FaceMesh maps 468 facial landmarks

03
EAR Score
Eye Aspect Ratio measured every 33 milliseconds

04
Response
Screen adapts colour + alerts you when fatigue detected

```
EAR = (|p2-p6| + |p3-p5|) / (2 * |p1-p4|)
```

INSTALL GUIDE

Ready in 4 steps.

1. **Download**
   Clone the repo or download the ZIP from GitHub

2. **Build**
   Run the bundler to compile the AI model
   `npm run build:detector`

3. **Load**
   chrome://extensions → Developer Mode → Load unpacked

4. **Start**
   Open dashboard → Allow camera → click Start Monitoring

Protect your eyes.

Start today — it's completely free.

- Free & Open Source
- Runs 100% on-device
- No data leaves your browser
- Built with TensorFlow.js FaceMesh
